The cranes have a cosmopolitan distribution, occurring across most of the world continents. They are absent from Antarctica and, mysteriously, South America. East Asia is the centre of crane diversity, with eight species, followed by Africa, which holds five resident species and wintering populations of a sixth.

Craniometry is measurement of the cranium (the main part of the skull), usually the human cranium. It is a subset of cephalometry, measurement of the head, which in humans is a subset of anthropometry, measurement of the human body. It is distinct from phrenology, the pseudoscience that tried to link personality and character to head shape, and physiognomy, which tried the same for facial features.

The Players. Dylan Avery and Jason Bermas, the creators of the low-budget documentary film Loose Change, did much to give the 9/11 Truth movement significant momentum in 2005 and in following years. The film, which has undergone several revisions, has been shown on many television stations but is primarily an Internet and DVD phenomenon.

All that's especially true if we can build Hoyt's cislunar tether transport system, powered by the difference in gravitational potential between the lunar surface and the Earth (so moving materials from the Moon to Earth is actually moving it "downhill" and you can exploit that through clever use of momentum exchange tethers). I think it's a reasonable argument that the Hoyt tether system ...
