In atomic theory and quantum mechanics, an atomic orbital is a mathematical function that describes the wave-like behavior of either one electron or a pair of electrons in an atom. This function can be used to calculate the probability of finding any electron of an atom in any specific region around the atom's nucleus. The term atomic orbital may also refer to the physical region or space where ...

At terminal (or settling) velocity, the excess force  $F_g$  due to the difference between the weight and buoyancy of the sphere (both caused by gravity) is given by:  $F_g = (\rho_s - \rho_f) V g$ , with  $\rho_s$  and  $\rho_f$  the mass densities of the sphere and fluid, respectively, and  $g$  the gravitational acceleration. Requiring the force balance  $F_d = F_g$  and solving for the velocity  $v$  gives the terminal velocity  $v_t$ .

A theory of leadership development is advanced, suggesting that changes in leadership skills may be viewed from the perspective of a general theory of learning and expertise, with consideration of the associated changes in information processing and underlying knowledge structures that occur as skill develops.

In a separate article, Owen explains why the residents of Manhattan are so much greener than Vermonters.. Green building myth #2. Walls have to breathe. Bored readers may move on to the next item; I know that this is a tired old argument. But the "walls have to breathe" statement still keeps popping up, so I'll take this opportunity to whack it back into its hole.
