Yellow Fever: Its Nature, Cause, Prevention & Cure: John

Yellow fever is an haemorrhagic disease caused by a virus that belongs to the genus *Flavivirus* (*Flaviviridae* family) and is transmitted by mosquitoes. Among the viral proteins, the envelope protein (E) is the most studied one, due to its high antigenic potential. Baculovirus are one of the most popular and efficient eukaryotic expression system.

Yellow fever virus envelope protein expressed in insect

Yellow fever, acute infectious disease, one of the great epidemic diseases of the tropical world, though it sometimes has occurred in temperate zones as well. The disease, caused by a flavivirus, infects humans, all species of monkeys, and certain other small mammals. The virus is transmitted from animals to humans and among humans by several species of mosquitoes.
